|--------------------------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Programming Languages</b>               | : C++, Python, C programming                                                                             |
| <b>Libraries &amp; Frameworks</b>          | : Numpy, Pandas, Matplotlib, Seaborn, Flask, Sk-Learn                                                    |
| <b>Data Science &amp; Machine Learning</b> | : Data gathering, Data cleaning, EDA, Feature engineering, Feature selection & Extraction, ML algorithms |
| <b>Basic Mathematics of ML</b>             | : Statistics, Probability, Linear Algebra, Matrices                                                      |
| <b>Tools / Platforms</b>                   | : Git, GitHub, VS Code, Jupyter Notebook                                                                 |
| <b>Databases</b>                           | : SQL                                                                                                    |

## Projects

---

### Book Recommender System | [Link](#)

Developed a content-based Book Recommender System using Python, HTML, Flask, Numpy, Pandas, and Scikit-learn. This end-to-end machine learning project features a GUI web application for personalized book recommendations, leveraging cosine similarity to suggest books based on user preferences.

### EDA - Data Analyst Project | [Link](#)

Conducted EDA as Data Analyst on online shopping project, forecasting Diwali sales using Kaggle dataset, aiding in predictive analytics for growth.  
Library used : Numpy, Pandas, Matplotlib, Seaborn

## Certifications

---

Machine Learning for Engineering and Science Applications - NPTEL  
Python for ML & DS Masterclass - Udemy
